BACK TO BASICS
TOWARDS A SAFER TOMORROW

Introduction

#CrimeMustFall

Data Collection

- Police recorded crime statistics are derived from an administrative data collection process.
- All crimes are recorded as and when they are brought to the attention, or detected by police, irrespective of when the crimes were committed.
- A docket is opened for every crime brought to the attention of the police and subsequently electronically transcribed on the Case Administrative System-CAS.
- CAS numbers are allocated chronologically according to the month-year on which the crime was reported.
- Each reported crime incident is allocated a crime code, which are then aggregated into Daily Summary of Serious Crime (DSSC) Code.
- DSSC codes are used for classification and statistical reporting purposes.

Raw Figures

- The focus of this report is the raw number of counts per serious crime category, they include 17 Community reported crimes and 4 Crimes dependent on police action for detection .
- All attempted crimes are included in the relevant categories.
- Cases closed off as "Unfounded" in accordance with the Standing Order (G) 325 - closing of dockets, are excluded for crime statistics reporting purposes.
- The annual report also provides percentage changes for each crime category.

Ratios

- To enhance equitable comparisons of reported crimes across provinces the this financial year Annual Crime report (2016/2017) will include population ratios per hundred thousand.
- The computation of ratios will cover only contact crimes, where the target is a person i.e. Murder, Attempted Murder, Sexual Offences, Assault GBH, Common Assault and Common Robbery.

Crime Counting Rules

- The source document for recording crime is a docket, and the **counting unit is a charge**.
- One docket may contain one or multiple charges i.e. **there can be more than one charge in one docket**.
- In case where multiple offences are committed within the same scenario, each offence will be recorded in addition to the primary offence. These additional counts also form part of the crime statistics (e.g. gang rape and common robbery).
- Regardless of the manner in which the cases are closed (withdrawn by the complainant or court and undetected), the recorded crime will still form part of the crime statistics.
- In this crime report the statistics represent the number of crime charges or counts and not the number of registered case docket.

INTRODUCTION

Crime Data Quality Management

Crime Statistics Management

- The quality assurance process is enhanced through SASQAF's South African National Statistics System (SANSS) framework of engagement. The latter has six components namely Problem Identification, Diagnostic Assessment, Development of Problem Solutions, Implementation of Solutions, SASQAF Self-Assessment and SASQAF Independent Assessment.
- Current crime statistics have complied fully with the first four components of the framework and have currently reached the self-assessment stage.

INTRODUCTION

Crime Data Quality Management

Crime Statistics Management

- The Clearance Committee assessed the previous two crime statistics publications for quality. The findings of these assessments were presented to the Crime Registrar for correction and implementation in the value chain of production.
- The Crime Registrar has incorporated changes in line with the Clearance Committee recommendations.
- The SASQAF self-assessment process was undertaken during the current financial year. The self-assessment is currently being discussed by the members of the SANSS and feedback will be provided in due course.

INTRODUCTION

Crime Statistics Dissemination

Dissemination policy

- To ensure accurate reporting the reports will be revised to take into consideration the changing of crime status during the course of the year.
- A draft crime statistics data dissemination policy has been developed to inform the stakeholders about the advance release calendar and also clarify the terms and conditions applicable to pre-release access. The draft document is still going through a consultative process.

Crimes Detected As A Result Of Police Action

Crime detected as a result of police action is usually not reported to the police largely deployment of law enforcement personnel and employment of intelligence. The crime is usually recorded after the apprehension of suspects in connection with the illegal possession of firearms and ammunition, drug-related crimes, driving under the influence of alcohol and/or drugs and sexual offences detected as a result of police action.
